

# Decommissioning and Carve out of SAP Systems

## Storing, Displaying, and Forwarding PC-based SAP Legacy Data

### Business Case: SAP Decommissioning/Carve out

An SAP system that is no longer used should be decommissioned or SAP data is to be specially provided for a carve out.

Data from SAP tables and documents of the legacy system must be stored. This legacy data should be used for evaluations without SAP application and should be reusable.

### Solution

Save legacy data and evaluate it without SAP system

### Your advantage

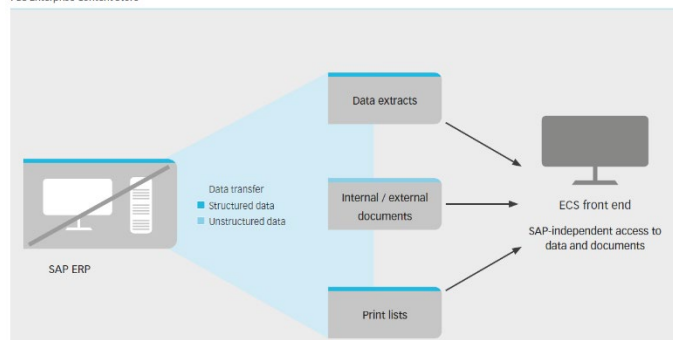

Fast, uncomplicated project implementation, cost-saving & future-proof

- Validated extraction using business or technical criteria – depending on the project requirements – in an SQL database
- Evaluation of table data and documents (SAP DART extracts, SAP print lists, with SAP linked original documents, PBS data extracts) using a PC-based analysis application
- Freely definable roles and authorizations to protect the data according to German GDPR (General Data Protection Regulation)

- Controllable and automated data extraction via templates
- Low project runtime: go-live within days
- Easy-to-use functions that also allow data retrievals for non-SAP users very easily
- Predefined views and reporting functions
- Data formatting for audits

- Cost-efficient license model
- Maintenance and license costs for an SAP legacy system can be avoided
- No longer dependent on SAP releases by SAP independent solution.
- Local, inexpensive storage of data and documents and their transfer to third parties (e.g. for audits) in AIS format
- Direct access to linked documents from compliant storage system is possible

PBS Enterprise Content Store

For more than 30 years, more than 1,700 well-known customers worldwide rely on our SAP add-on solutions. These solutions aim at making full advantage of data archiving to increase substantially the SAP system performance, reduce databases, or decommission systems at low cost. At the same time, we provide an integrated access to online, archive, and external data to meet all requirements for GDPR (General Data Protection Regulation) and GoBD (German legal accounting standards).
